Description:

No Psilocybin or Psilocin was detected in the sample at or above the limit of quantification (0.005mg/g).

Notes:

Potency assays performed on the same harvest batch of fruits with varying states of age as present in batch to represent the potency.

^{*} Total Potencial Psilocin in a calculated value representing the possible maximum if all psilocybin was converted to psilocin.

^{*}For Research, Forensic, and Harm Reduction Purposes

^{*}Instrument Calibration performed using DEA exempt certified reference materials

^{*}Extracts are prepared in concentrations within DEA exemption limits

^{*}Samples are immediately rendered unusable upon completion of assay

^{*}Results are reported as percent by weight and milligram's of compound per grams of sample

^{*&}lt;LOQ means "Below Limit of Quantitation", meaning the analyte was not detected at or above the threshold of quantitation.

^{*} Total potential Psilocin = Psilocybin * 0.719 + Psilocin. This value represents the possible maximum of psychoactive psilocin.
