Notes:

Potency assays performed on the same harvest batch of fruits with varying states of age as present in batch to represent the potency.

*For Research, Forensic, and Harm Reduction Purposes

*Instrument Calibration performed using DEA exempt certified reference materials

*Extracts are prepared in concentrations within DEA exemption limits

*Samples are immediately rendered unusable upon completion of assay

*Results are reported as percent by weight and milligram's of compound per grams of sample

*<LOQ means "Below Limit of Quantitation", meaning the analyte was not detected at or above the threshold of quantitation.

* Total Equivalent Psilocybin = Psilocin * 1.391 + Psilocybin. This value represents the equivalent amount of psilocybin if none had been converted to psilocin
